

Clinical Examination

Executed for:
ESHA

Address:

Executed on:	13/09/2024
Name:	GAMBLITE PROOSTHOF Z
Chip Number:	981100004214942
UELN Number:	056015Z55681416
Origin:	
Sex:	F
Birthdate:	18/04/2016
Colour:	chestnut

A clinical examination was performed.

Clinical Examination:

Conformation and stand:	normal
Nutritional Status:	normal
Skin and coat:	skin discoloration around eyes (vitiligo)
Mucous membranes:	normal
Lymph Nodes:	normal
Eyes:	normal; Left lower eyelid : skin laceration (old wound)
Mouth:	normal at superficial inspection
<u>Cardiovascular System</u>	
Heart rate at rest:	normal
Heart rate after exercise:	normal
Jugular vene:	normal
<u>Respiratory System</u>	
Respiration at rest:	normal
Respiration after exercise:	normal
Spontaneous coughing:	normal
Larynx sensitivity:	normal
Type of respiration:	normal
<u>Digestive System:</u>	
normal	
<u>Urogenital System:</u>	
normal	
<u>Nervous System:</u>	
normal	
<u>Inspection and Palpation</u>	
Head:	normal
Neck:	normal
Withers:	normal
Back:	normal
Croup:	normal
Left front limb:	normal
Right front limb:	normal
Left hind limb:	normal
Right hind limb:	normal
Fore and Hind Hooves	
Horn quality:	normal
Hoof percussion:	normal
Size and shape:	normal
Fore and Hind Shoeing:	not
Scars:	normal

This report is only valid if provided with a signature and general terms and conditions.

Gait:
Walking on hard surface

Straight line:	normal
Small circle left:	normal
Small circle right:	normal

Trotting on hard surface

Straight line:	normal
Small circle left:	normal
Small circle right:	normal

Trotting on soft surface

Small circle left:	normal
Small circle right:	normal

Cantering on soft surface

Small circle left:	normal
Small circle right:	normal

Walking backwards:

normal

Flexion Tests:
Forced Flexion

LF:	not sensitive
RF:	not sensitive
LH:	not sensitive
RH:	not sensitive

Trotting Away

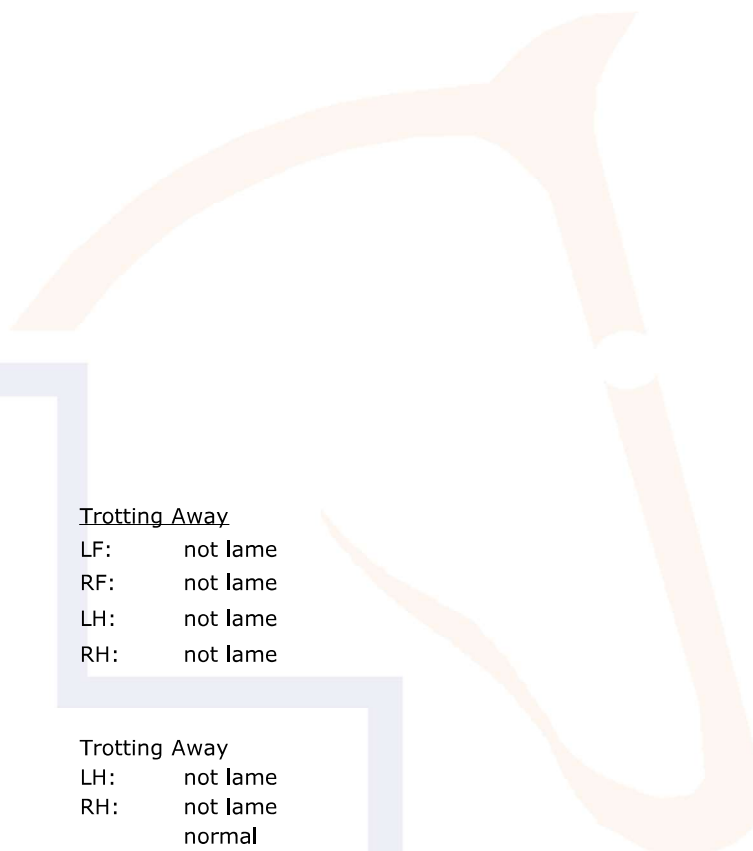

LF:	not lame
RF:	not lame
LH:	not lame
RH:	not lame

Spavin Tests:
Forced Flexion

LH:	not sensitive
RH:	not sensitive
Inspection of stifle:	

Trotting Away

LH:	not lame
RH:	not lame
	normal

Other findings and remarks: no
During the examination there were no indications of vices.
After the examination blood samples were not taken for investigation of banned substances.

Kind regards,

Terms and conditions

A prepurchase or sale examination gives only my personal assessment of the current medical condition of the horse. Linked is a type of risk assessment of medical problems that can happen regarding the use of the horse.

This examination has several limitations:

- Each exam is a snapshot. Any horse can at one moment seem very healthy, or at another limping, showing heart murmurs or respiratory distress. This difference may be due to coincidence, occurred after injury or illness, changes in housing, whether or even drug camouflage prior to the exam.
- If the customer wants it, there is the possibility to include a blood sampling to detect illegal substances.
- It deals no obligation towards any results. The horse is examined in function of a client and the purpose for which the horse will be used. This exam and the standards used for it, can therefore vary between clients and horses. This report is therefore only applicable to no one else than the person stated on the report.
- The client agrees with the extent of the investigation, and realizes that this is always a compromise between risk-limitation and price for the exam. If for example an additional endoscopy or additional X-rays are desirable, this can be asked in advance or during the exam.
- The standards used in the radiographic examination can be different from those used by colleagues or universities and can differ between what is common in different countries. There are only those findings indicated that I believe are important. Deviations that I believe have no interest are not mentioned. Example: fragments at the distal border of the navicular bone (with or without a recess in the navicular bone itself), ossification of the hoof cartilage, etc.
- Since this exam is no research addressing the capabilities of the horse as a riding or sporthorse... Neither is it a valuation of the horse.
- It cannot clearly demonstrate whether the horse might have had surgery or other treatments, such as repeated infiltration of the joints, colic surgery, ... Hence it is the sole responsibility of the purchaser to cover himself here.
- It is also the sole responsibility of the purchaser to cover himself in terms of stable vices such as: crib biting, wind sucking, weaving ...
- The buyer must be aware that some diseases are seasonal, so they may not be present at the time of the inspection. (for example summer itch, headshaking, ...)
- About this aspect he must cover himself as well.
- If the buyer wants to insure the horse, he will have to wait before buying it, until he has the approval of the insurance company. A test conducted by myself, is not automatically an approval for an insurance company. They may have different standards.
- This exam gives you no advise as a future stallion, because the standards used for this can be vary between the different studbooks.
- It is also the buyer's full responsibility to receive the full ownership papers included the "mutatie luik" of the horse.

This report is only valid if provided with a signature and general terms and conditions.
