## Description and summary clinical examination

Bpdy score 3/5

Height 161 cm

Legs OK

Observations OK

## Radiographic examination

The following X-rays were taken: profile of the front and rear fetlocks, profile of the hocks, oblique plantar-lateral dorsomedial view of the hocks, profile of the stifles, profile of the front feet. Within the limitations inherent to the examinations performed, the following observations can be made.

Articulation	Imaging classification x-rays	Comment
Fetlock RF	Normal	
Fetlock LF	Normal	
Fetlock RH	Normal	
Fetlock LH	Suspicious	The presence of a small fragment of the plantar-proximal aspect of the first phalanx cannot be ruled out.
Hock RH	Normal	
Hock LH	Normal	
Stifle RH	Normal	
Stifle LH	Normal	
Foot/PODO RF	Normal	
Foot/PODO LF	Normal	

## Conclusion

We thank you for your cooperation in the screening program for developmental orthopaedic disorders.

Within the limits inherent in the examinations carried out to date, we suspect the presence of a lesion in the right hind fetlock, as described above.

Given Look At Me's age, the assessment regarding possible OCD lesions can be considered definitive.

Please feel free to show the X-rays taken during this examination to your treating veterinarian and ask for their opinion.

We remain at your disposal for any further information you may require.
